

Usman Tahir Qureshi

Site Reliability Engineer • DevOps Engineer • Cloud Infrastructure Engineer
usman.nja.14@gmail.com | (616) 334-9660 | linkedin.com/in/iusmanq | github.com/UsmanQT

PROFESSIONAL SUMMARY

Site Reliability Engineer with 2+ years of hands-on experience building and operating distributed applications on AWS across development and production environments. Proven track record in 24/7 on-call rotations, root cause analysis, and proactive alerting trend identification. Delivered zero-downtime upgrades for PostgreSQL and Redis across multi-environment platforms, automated infrastructure rollouts via CI/CD pipelines, and led disaster recovery exercises for multi-region failover. Strong Linux systems background e.g. RHEL/Ubuntu, Python scripting, and infrastructure-as-code using AWS CDK and CloudFormation.

TECHNICAL SKILLS

Databases: PostgreSQL, Aurora RDS, MySQL, SQL Server, Snowflake, Redis, ElastiCache
Languages: Python, Bash, TypeScript, SQL, Go, Java, C++, JavaScript
Cloud Platforms: AWS, Azure, GCP, Cloud SQL concepts
CI/CD & IaC: GitLab CI/CD, Jenkins, GitHub Actions, AWS CDK, CloudFormation, Ansible, Terraform
Observability: Splunk, Datadog, CloudWatch, Cribl, Prometheus, Grafana
Reliability Practices: On-Call, Incident Response, Root Cause Analysis, Postmortems, SLOs, DR, Git, Source Control
Containers & OS: Docker, Podman, Kubernetes, AWS EKS, RHEL, Ubuntu, Linux Administration
Security: IAM, Prisma Cloud, Rapid7, DevSecOps, PCI-DSS
Networking: TCP/IP, DNS, VPC Networking, Routing, Load Balancing

PROFESSIONAL EXPERIENCE

DevOps / Site Reliability Engineer | Greensky LLC

March 2025 to April 2026 | Atlanta, GA

- Operated AWS infrastructure for production and development environments, managing distributed Aurora RDS PostgreSQL and Redis (ElastiCache) microservices across four environment lifecycles with zero-downtime version upgrades.
- Proactively identified alerting trends across Splunk, Datadog, and CloudWatch; created development tasks to remediate recurring patterns and decommissioned hundreds of stale alarms to cut cloud spend.
- Participated in 24/7 on-call rotation; performed root cause analysis using Splunk and Datadog to triage production incidents, drive rapid MTTR, and deliver blameless postmortems.
- Authored Python and Bash scripts to automate infrastructure operations, including LDAP user group sync across a 4-node master-master cluster, reducing manual effort by ~80%.
- Automated infrastructure rollouts using GitLab CI/CD pipelines with self-hosted runners, eliminating manual workflows and standardizing peer-reviewed delivery of all platform changes.
- Led quarterly disaster recovery exercises using AWS ARC and Route 53 multi-region failover, validating cross-region database and service availability with structured post-failover test suites.
- Managed continuous vulnerability triage using Rapid7 across all environments, prioritizing remediation by severity SLA and coordinating closure with application teams to maintain PCI-DSS compliance.
- Decommissioned hundreds of stale CloudWatch alarms and ECS task definitions; built a company-wide EOL tracker to reduce cloud spend and flag teams ahead of end-of-life deadlines.
- Managed IAM roles, policies, and access controls across AWS environments, enforcing least-privilege principles for service accounts and developer access.

Research Scientist (Software Engineer) | Grand Valley State University

Feb 2024 to March 2025 | Grand Rapids, MI

- Designed and deployed AWS cloud infrastructure using CloudFormation for production applications used by the Michigan Department of Natural Resources.
- Implemented CI/CD pipelines using GitHub Actions to automate build, test, and deployment workflows across development and production environments, improving release reliability.
- Built an AI-native RAG chatbot integrated into the GVSU Laker mobile app using Mistral, vector embeddings, and a full retrieval-augmented generation pipeline.

PROJECTS

- Aurora PostgreSQL Major Version Upgrade** Orchestrated zero-downtime PostgreSQL major version upgrade across all lifecycles for the Kong API Gateway database; executed PROD cutover during maintenance windows with no service disruption.
- ElastiCache Redis Fleet Modernization** Performed rolling upgrade of a Redis replication group from v5 to v7 across all environment lifecycles, achieving zero downtime through staged node replacement and continuous availability validation.
- Rundeck Platform Migration and GitLab Pipeline Integration** Migrated MySQL schemas, upgraded Rundeck v3 to v5, performed DNS cutover with zero production downtime, then re-architected job management into version-controlled GitLab pipelines.
- Snowflake Security Logging Pipeline** Built an end-to-end log ingestion pipeline for Snowflake authentication events, enabling clear security visibility through clean, tagged, reliably routed log data.
- S3 Bucket Fleet Migration to CDK** Contributed code to internal CDK library and migrated all S3 buckets across every lifecycle to a Bucket Manager CDK framework, standardizing governance organization wide.

EDUCATION

Master of Science in Computer Science | Grand Valley State University, Grand Rapids, MI

Aug 2022 to Dec 2023
